

Sylc™ and Aquacut Quattro technology combine to give a totally new and superior cleaning experience.

- ① Cleaner, brighter teeth.
- ② Less sensitive teeth.
- ③ Healthier teeth.

Sylc™ for Aquacut has received excellent feedback from patients. Some comments:

"It was the most pleasant compared to the normal polishing I have previously experienced"

"After viewing the before and after photos of my teeth - wow. What a difference. Highly recommend!! 5 star."

"The best my teeth have ever felt!"

"Best scale & polish I ever had. I HATE scales & polishes. This treatment is much better."

Sylc

WHAT CAN I EXPECT DURING AND AFTER MY TREATMENT WITH Sylc™?

You should expect to have a 'sandy' feeling on your teeth immediately after treatment. Don't worry; these are the natural minerals attaching to the tooth surface. The 'sandy' feeling will go away leaving you with bright and smooth teeth. Sylc™ is sprayed painlessly onto the tooth and this is often done before and/or after scaling.

HOW LONG SHOULD I WAIT TO EAT OR DRINK?

It is recommended to wait at least 1 hour after treatment so that the minerals have formed the protective enamel-like layer.

HOW OFTEN SHOULD I BE TREATED WITH Sylc™?

Every cleaning appointment.

ARE THERE ANY SIDE EFFECTS?

Sylc™ has been approved for cleaning and polishing and no side effects have been reported with the use of Sylc™.

**Petre
Dental**

Using a brand new desensitising
polishing powder!

REDUCES TOOTH SENSITIVITY

The **Aquacut Quattro** uses particle polishing to perform superior stain removal and treat sensitive teeth. The system utilises a jet of pressurised water together with a special powder to remove stains gently and reveal the natural whiteness of teeth. It removes all kinds of stains including those from smoking, coffee, tea and red wine.

With the Sylc™ for Aquacut powder, removing the most difficult-to-reach stains has become easier and a lot more comfortable! With its unique bio-active properties, Sylc™ not only helps to clean teeth, but reduces sensitivity as well. Compared to other cleaning and polishing powders, Sylc™ for Aquacut cleans teeth faster and with no unpleasant salty aftertaste.

Sylc™'s unique formulation contains over 99% Novamin® - an advanced calcium phosphate technology, scientifically proven to reduce sensitivity. Sylc™ particles quickly help seal the channels that are responsible for sensitivity. It then forms a hard, enamel-like layer which bonds to the tooth giving longer lasting protection from hot and cold drinks and food.

BRIGHTER TEETH

With its ability to vary components such as air pressure, powder and liquid flow rate, the **Aquacut Quattro** can help make cleaning even very sensitive teeth painless.

- Cleaner, healthier teeth.
- Brighter smile.
- Restores the natural lustre and appearance of healthy teeth.
- Provides quick desensitisation upon application.
- Stain removal from foods, coffee, tea, wine and tobacco.
- Non-invasive painless procedure.
